PROFESSOR DR. EDUARD SCHÄR
Strassburg

Silbermannstraße 1
February 19, 1901

Dear Dr. Bredig,

I would like to thank you most sincerely for your treatise on "Inorganic Ferments" that you kindly sent me. I will, of course, read through it carefully over the next few days and will no doubt find a lot of

(page 2)

of new data that are of special interest to me. In order to garner interest, I think it is quite

appropriate that you publish a summary of your previous investigations into H_2O_2 catalysis, even though they are certainly far from complete. I have recently discovered some remarkable facts about H_2O_2 , which I shall share with you sometime (regarding the activating effects of superoxide on ferric and cupric salts). These would have made Schönbein very happy as modern proof of the theory of antagonides and bonides in relation to O-polarization.

Warm regards (in haste),
Eduard Schär
